

## Exodus 12:1-6 – The Exodus – First Month in a Row

At the time of the first Passover, and every year after that, Passover was fixed to the 14th day counted from the first day of the First Lunar Month (Abib) in spring. It was dually fixed to the sixth day of the second week of the year followed by the seventh-day Sabbath on the 15th. The first day of the Feast of Unleavened Bread was called a “High Day” only because it was both the seventh-day Sabbath and the first day of the Feast. (Leviticus 23: 4-16). This caused the Sabbaths for the First Month (Abib) of each year to be consistently fixed to the 8th, 15th, 22nd, and 29th (Exodus 12). Refer to the full article, *Three Months in a Row*.

This can only occur if the days of each month are refreshed and restarted on the New Moon Day. This was the Creator’s purpose for which He had created the moon’s LIGHT, to measure YEARS, MONTHS, WEEKS, and DAYS in unison with the starry constellations after sunset. All the ruling luminaries rule time from east to west when they are visible.
